

Paramedic Prompt Card for Acute Stroke Bypass Protocol- Paramedic Training | BLS PCS V.3.3

This quiz is meant to complement The Paramedic Prompt Card for Acute Stroke Bypass Protocol- Paramedic Training Module developed by CorHealth Ontario. To access the self-training education module please click [here](#)

- 1. A designated Stroke Centre is a Regional Stroke Centre, District Stroke Centre or a Telestroke (Thrombolysis) Centre regardless of Endovascular (EVT) capabilities**
 - True
 - False
- 2. Patients who meet the criteria outlined in the Acute Stroke Bypass Protocol may be redirected to the closest or most appropriate stroke centre if:**
 - They do not meet any of the contraindications listed
 - They can be transported to a Designated Stroke Centre within 4.5 hours of stroke symptom onset
 - They can be transported to a Designated Stroke Centre within 6 hours of stroke symptom onset
 - A and C
 - A and B
- 3. Large vessel occlusions are the most common type of ischemic stroke**
 - True
 - False
- 4. The Los Angeles Motor Scale only needs to be used in regions implementing Direct Access or Mothership Transport Models**
 - True
 - False

5. EVT is not a time dependent procedure

- True
- False

6. All designated stroke centres are capable of providing Endovascular Thrombectomy

- True
- False

7. The Los Angeles Motor Scale is to be used as a primary screening tool to identify patients experiencing the signs and symptoms of stroke

- True
- False

8. The three domains captured in the LAMS Tool are:

- Facial Droop, Arm Drift, Grip Strength
- Facial Droop, Speech, Grip Strength
- Speech, Arm Drift, Grip Strength

9. The LAMS score should be used to identify patients who may be experiencing a stroke

- True
- False

10. A LAMS score of 4 or higher could indicate a more severe stroke

- True
- False

11. The Los Angeles Motor Scale only needs to be used in regions implementing Direct Access or Mothership Transport Models

- True
- False

12. The LAMS score should be included as part of the hospital pre-notification process

- True
- False

13. Patients with a LAMS score of less than 4 are not having a stroke and do not need to be transported to a Designated Stroke Centre

- True
- False

14. The Los Angeles Motor Scale is a pre-hospital screening tool to assist with determining stroke severity and transportation destination. It is NOT a substitute for a full neurological exam

- True
- False

Answer Key

1. True
2. A and C
3. False
4. False
5. False
6. False
7. False
8. Facial Droop, Arm Drift, Grip Strength
9. False
10. True
11. False
12. True
13. False
14. True
